MP Machine Manuals

Shining 3D Einstar

3D Scanner

Introduction

This is a helping document for finding 3D scanner resources and extra links to help the user use the device. This is not a written manual, but rather a helping tool in finding online manuals and guides to use the 3D scanner. The user can refer to this guide to find the manual written by Shining 3D, extra videos and links to online resources.

The 3D scanner available at Makersplayce is the property of Makersplayce, you may only borrow it for your own use.

How to Start

What you first need to do is to install the software and make a new Shining 3D account. To see the step by step guide and the specifics your computer needs to have for the installation of the software, refer to the manuals listed below. You can make a new account with the following link:

Signing up for Shining 3D: https://passport.shining3d.com/signup?utm_source=aniwaa

After signing up, you can log in to the software with the account you've just made and connect the scanner to your laptop as shown in the manuals with the cable and the adapter. You will need an extra C13 power cord from the adapter to the power outlet, you can borrow this from Makersplayce as well. The two long straight lights on the device will turn blue when it is properly connected to your laptop and to the power outlet.

The device is already activated and calibrated, so you can follow through with the next steps. If it has been a long time since calibration, you might need to calibrate again before starting.

User Manual(s)

Below are the manuals for the 3D scanner written by the Shining 3D themselves. Multiple links are provided in case one of them doesn't work overtime. If the first one doesn't work, click on the next one to check if that works.

In the PDF manuals, you can better use the table of contents to jump to certain chapters by clicking on the name of the chapters.

How to shut down

After you're done with scanning, make sure to save your files and shut down the program. Disconnect the device and put all the cables neatly back to their boxes, and bring the case back to Makersplayce along with the power cord.
